

Aquaponic I-Greenhouse

MARCHAND Charles - PELLICER Marion

2016-2017

S8 Project - RICM4

I-Greenhouse : the concept

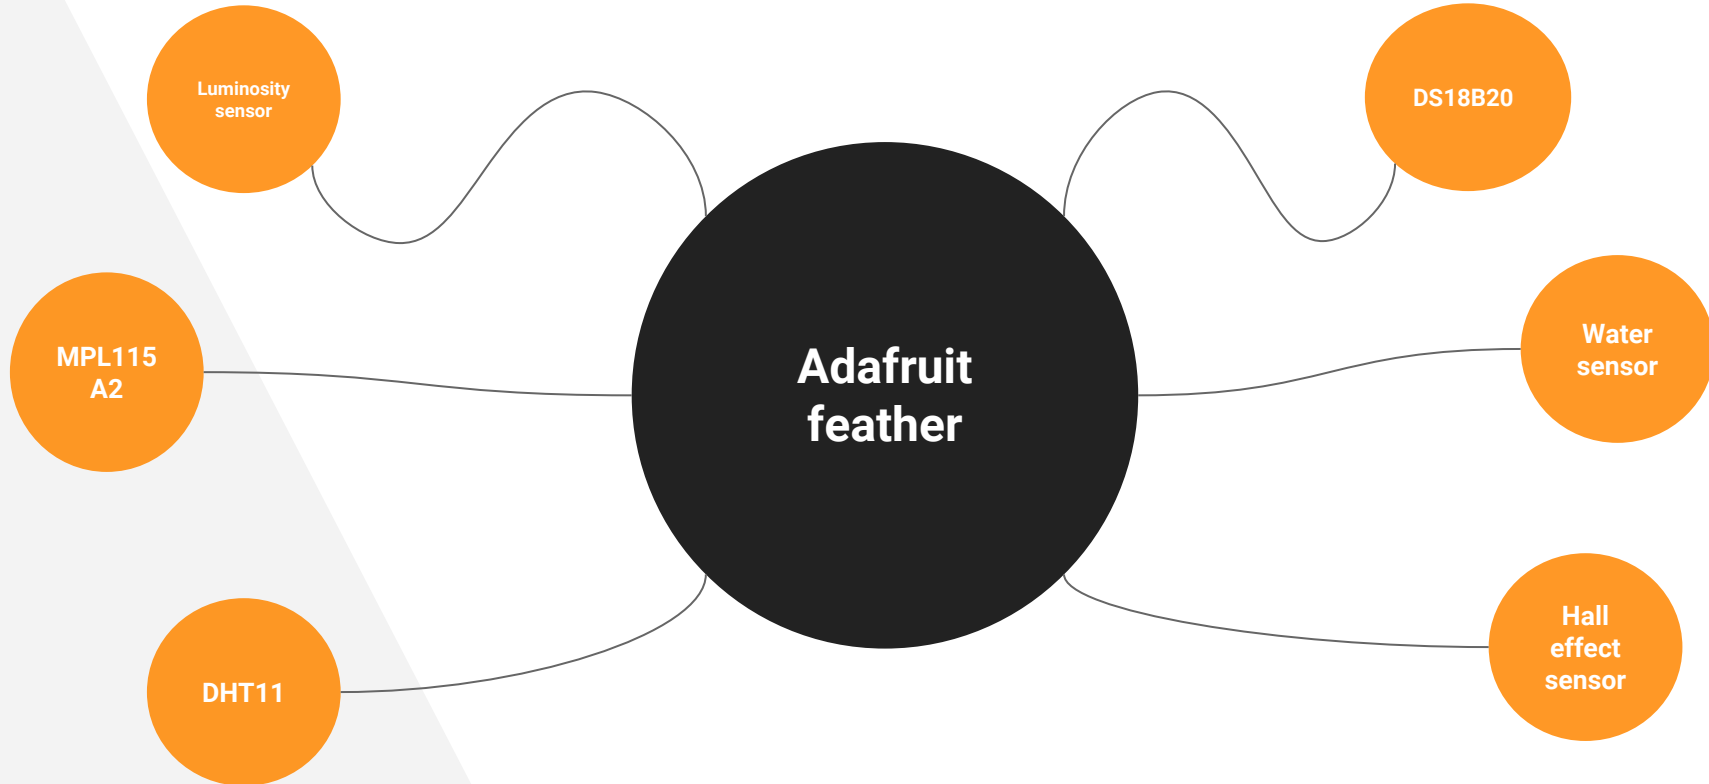

- ▶ Retrieve measurements
- ▶ Send measurements to a server
- ▶ Display with Grafana

1.

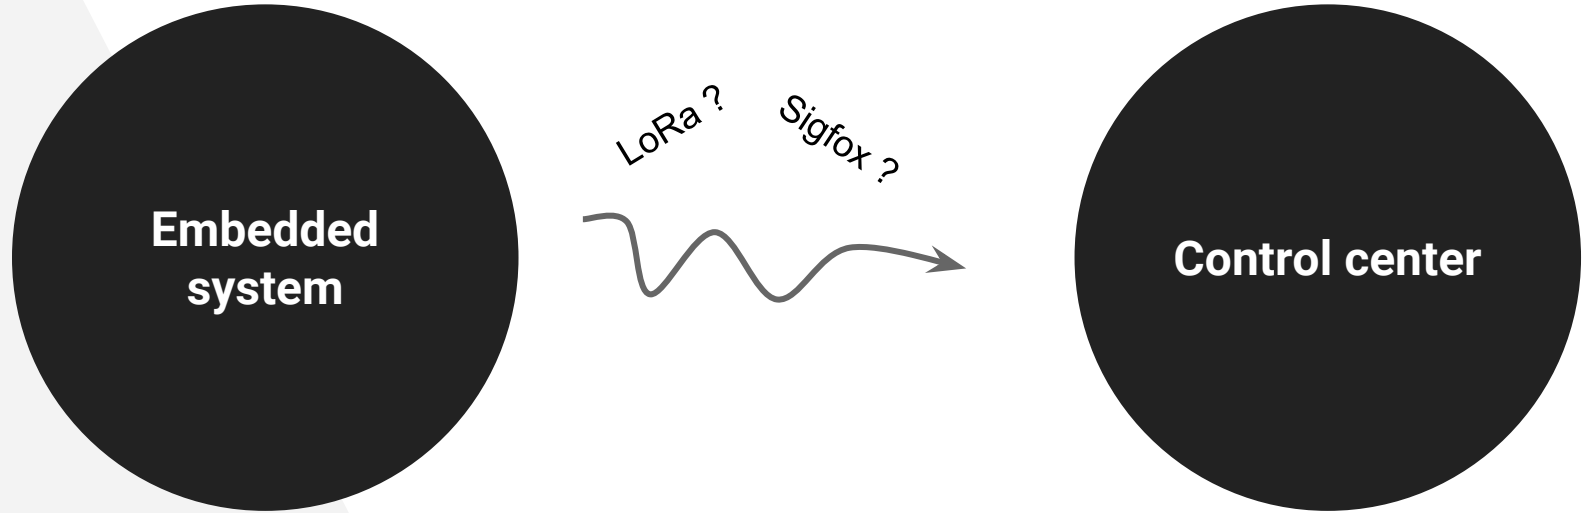

Retrieve measurements

“And with the right sensors please”

The “embedded system”

“The” radio protocol

LoRa!

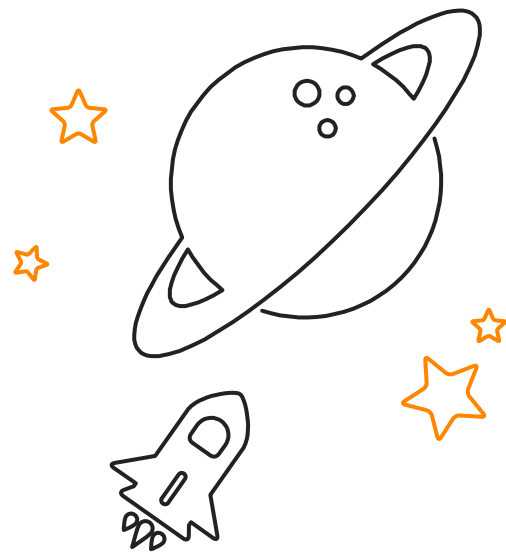

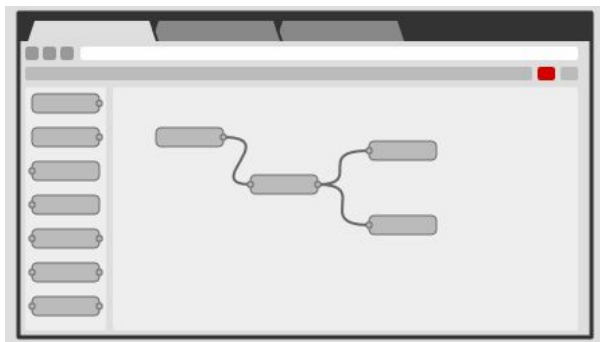

Why ?

- ❑ High range, accurate
- ❑ No SIM / GSM
- ❑ Opportunity to create your own network

2.

Data processing

“The most important thing is not the numbers, but what you make of them...”

Node-RED

The utility to manage flows !

Some tools

Mosquitto

- ▶ MQTT

InfluxDB

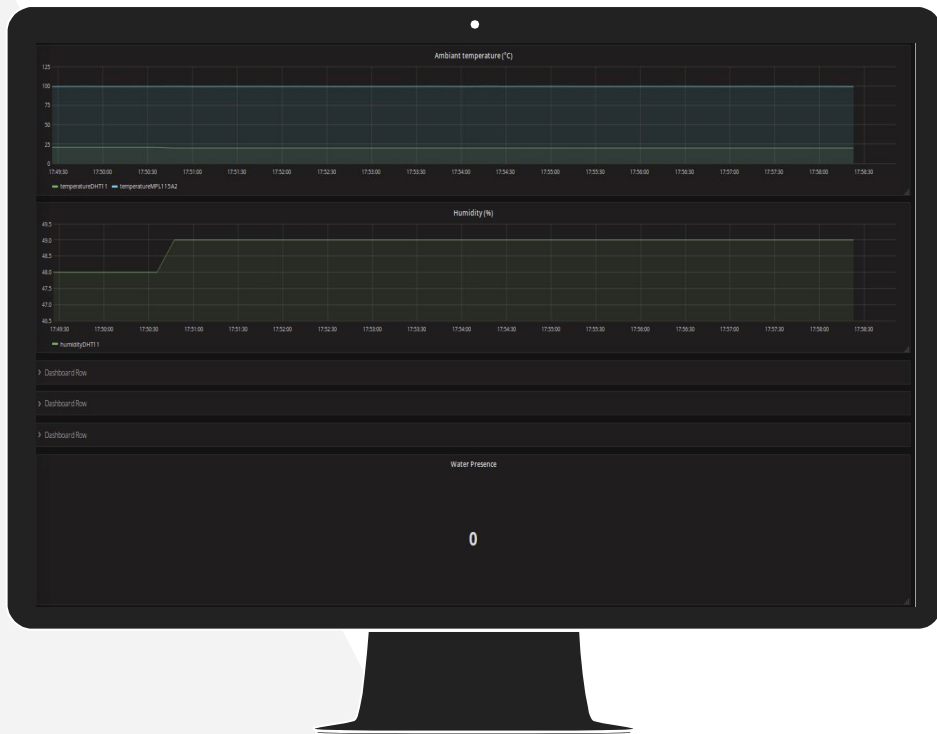

- ▶ Connection to a time series database

Grafana

- ▶ Graaaaaaphs !

The final display !

When all's working...

3.

Using our project ?

What more should be done ?

- ▶ Make the gateway *“plug and play”*
- ▶ Adorn the embedded system
- ▶ Writing an instruction manual

Thank you for your
attention !

Questions ?
