

Poly Assistant

PERSONAL

Vocal
Assistant

Our solution

A personal assistant that works quickly and tirelessly. In fact it is much smarter than the so-called smart assistants we all have in our phones because we are using ChatGPT as our generator of responses.

So we created a proof of concept, an android app, that communicates with ChatGPT directives.

What is ChatGPT?

ChatGPT is a large language model developed by OpenAI, designed to communicate with humans in natural language. It has been trained on a diverse range of text data and use that training to generate responses to user inputs.

 OpenAI
ChatGPT

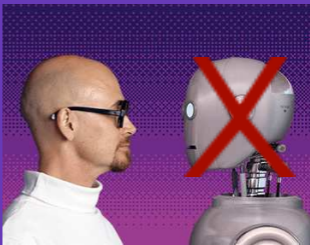

Used technologies

Our goal

Provide a proof of concept, a vocal assistant that is much more interactive than other vocal assistant, you will feel that you are talking to a real human but not a robot!

About us

We are a group of 4 students at Polytech Grenoble, and we are interested in AI and software development.

Download our app on playstore!
