

Let's go out

Why you should use Let's go out

Covid-19 has narrowed our opportunities to **meet new people**. Our app is the best solution to find people with the same hobbies as you.

How did we approach this project ?

We've chosen our technologies as follows :

First we used Vue JS for what is called "front end", which is the design for the **user interface**.

We also used Flask alchemy for the **server** and the **database**, which allows us to **store datas** such as users accounts.

POLYTECH[®]
GRENOBLE

Wanna make some friends ?

Let's go out is the first application entirely **free** that you can use to **socialize** and meet new friends around your city.

Our objectives

To create an **intuitive** application that is not age limited.

What activities to do ?

It's all about what activities you want to do. Every user is free to create his own activity to invite people. It can be about sport, cinema, culture or anything else.

Outcome

We aim to have around **100 active** users after the first launch month, and around **20 times more** after one year.
