## eIDAS Project

## CONTEXT

The aim of Polytech Grenoble is to train its students in the engineering profession in various fields. It sometimes has to sign many internship agreements. With this in mind and in view of the current health situation, the aim of the project is to design and develop a service to sign internship agreements digitally.

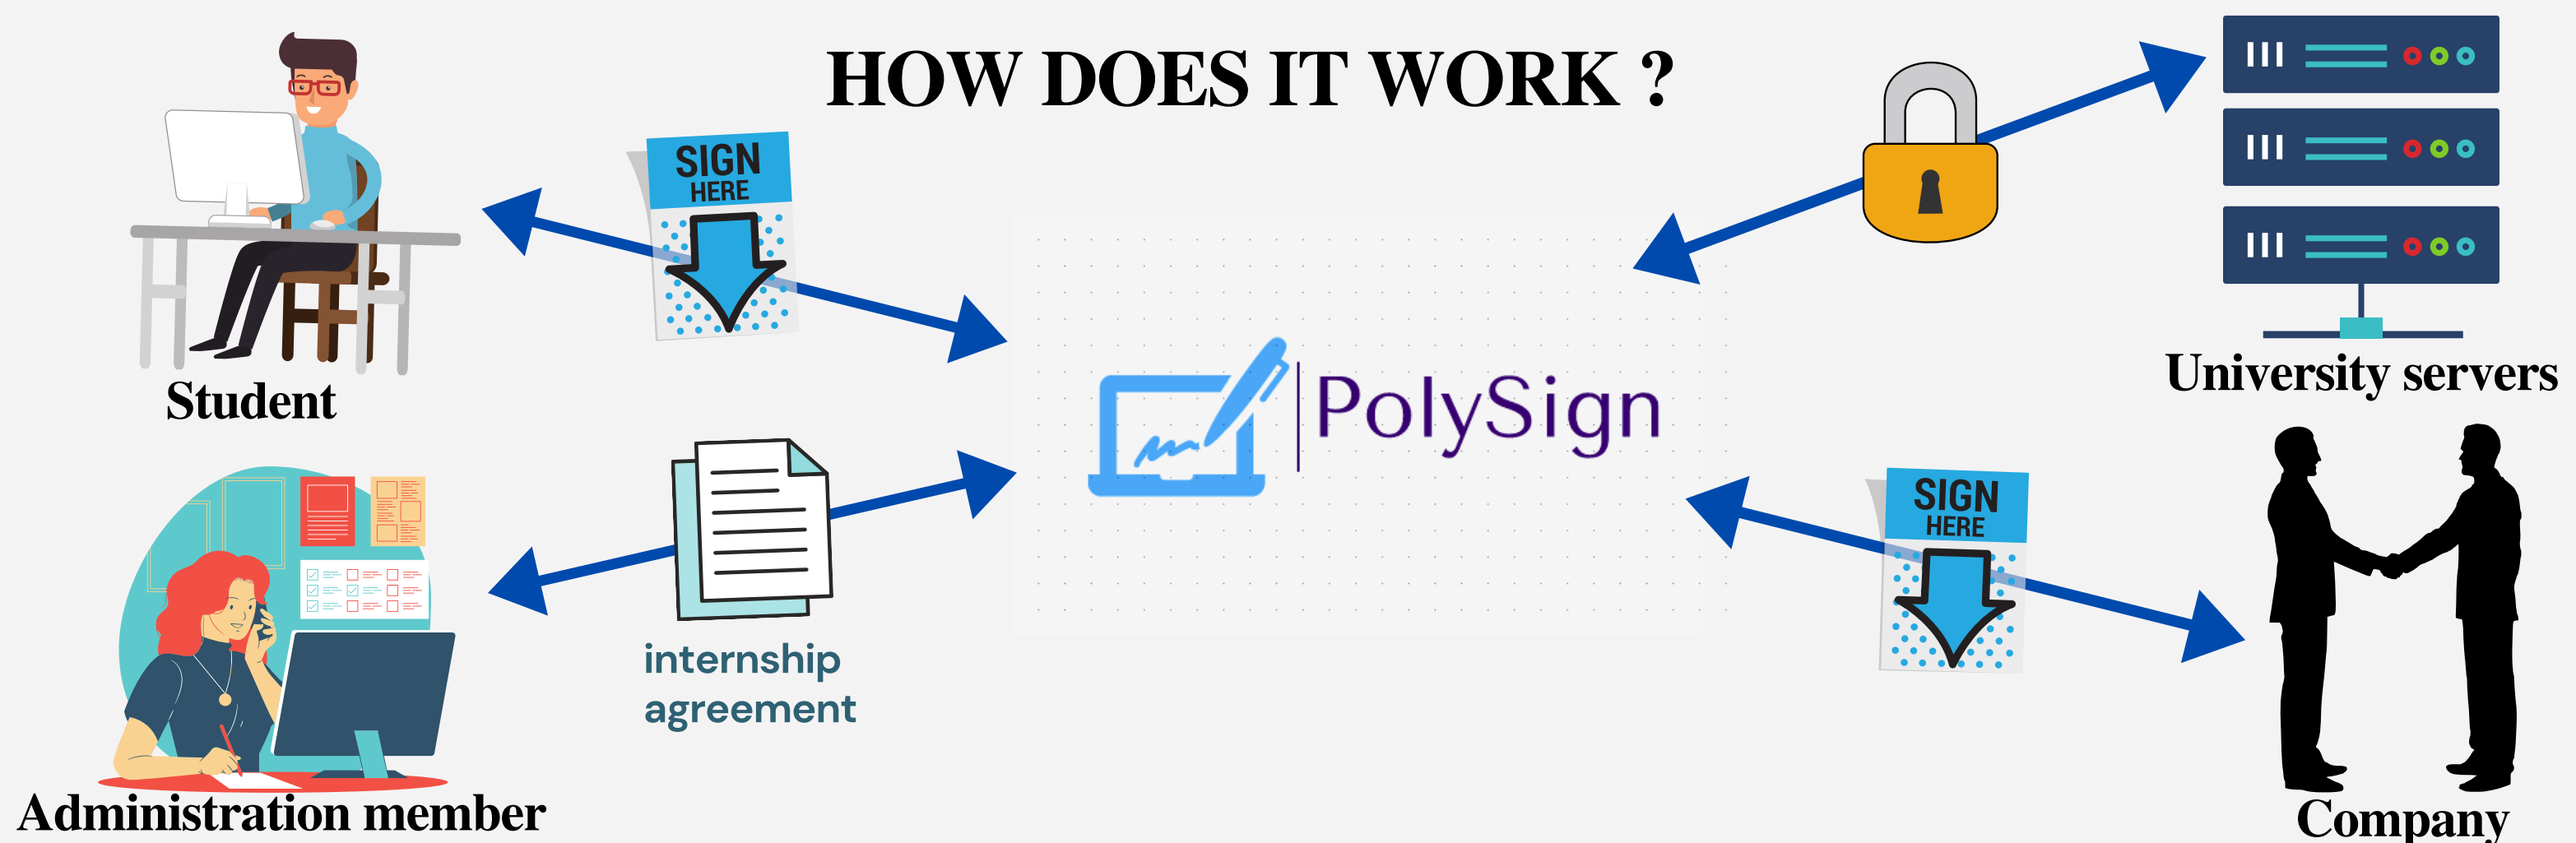

## OBJECTIVES

Integrity  
Authentication  
Non-Repudiation  
Security  
Autonomy  
Ecology  
Social distancing

## HOW DOES IT WORK ?

## CONCLUSION

In the era of the current health situation, there is an increase in the use of digital technologies in order to deal with this situation. So our team is going to build and implement a service of digital signature. This implementation should respect the European (eIDAS) and French (ANSSI) policies.

Thanks to this project, the UGA university and Polytech Grenoble will have their own free digital signature service so they can have control on the all process and save their data locally.
