#### **Preamble**

Prerequisites before we can start talking about KiND

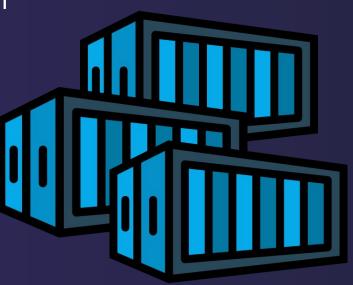

Core concepts overview

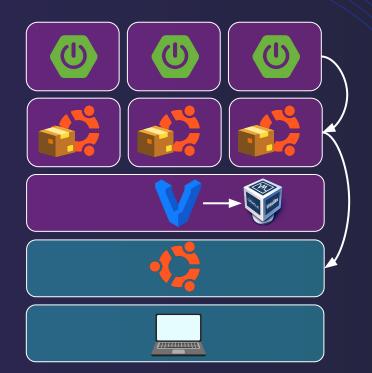

Docker

#### Containers

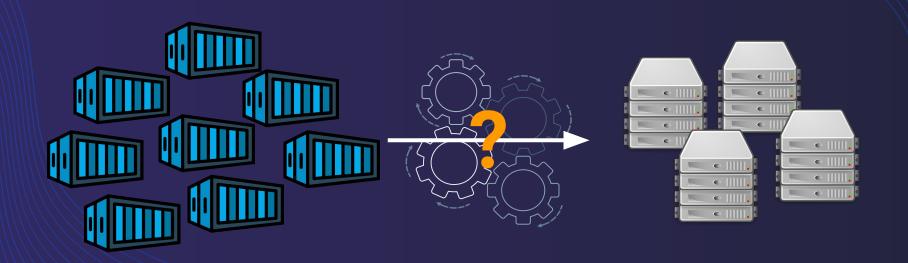

#### Kubernetes (K8S)

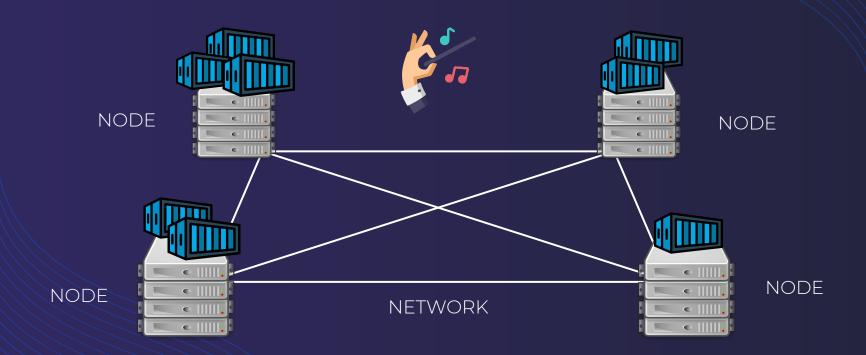

The "Captain"

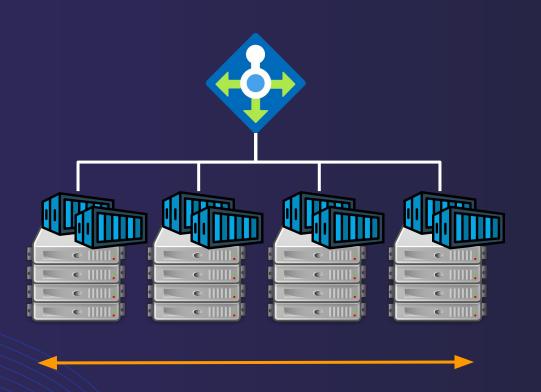

#### Containers across machines

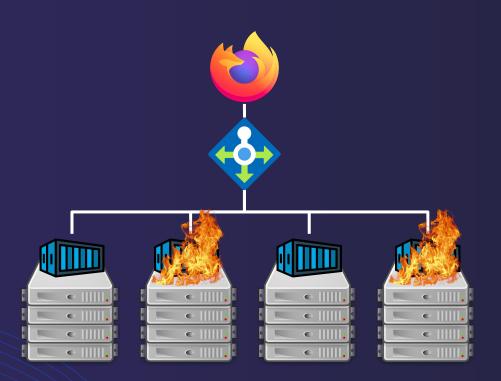

#### **Container orchestrator**

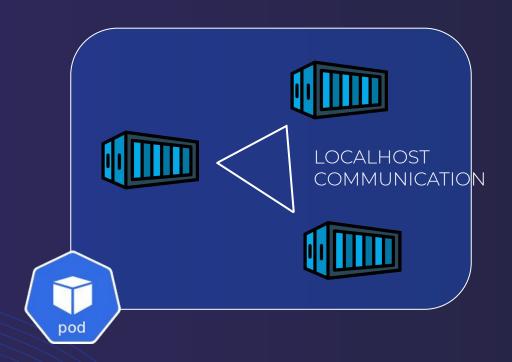

#### Horizontal scaling & Balancing

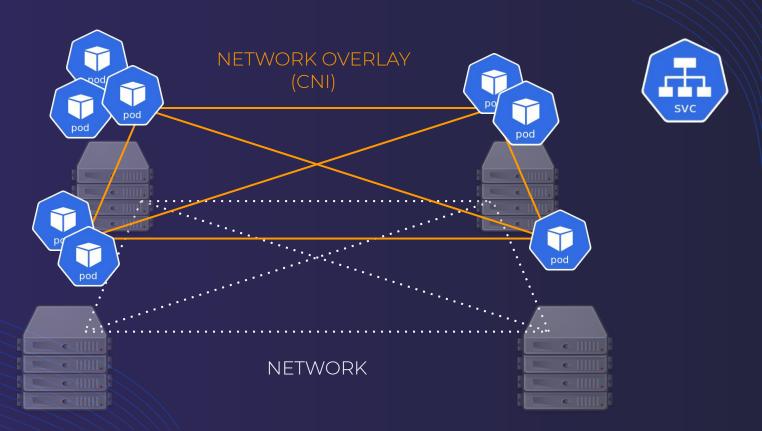

#### Self-healing

#### **Network model**

#### **Network model**

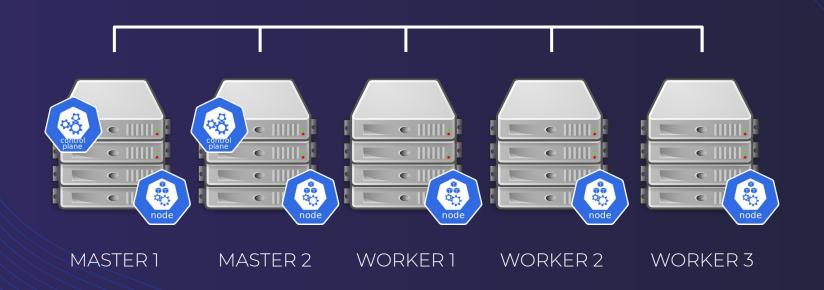

#### For microservices, by microservices

#### Cluster organization

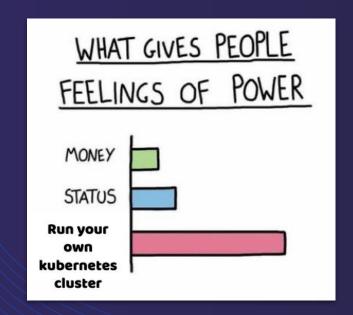

#### Main K8S objects overview

#### Cluster architecture example

But what about...

local development? local testing?

#### E2E testing environment

Remote (cloud-like)

Realistic Costly

**Local**Simple
Limited resources

### KiND Kubernetes in Docker

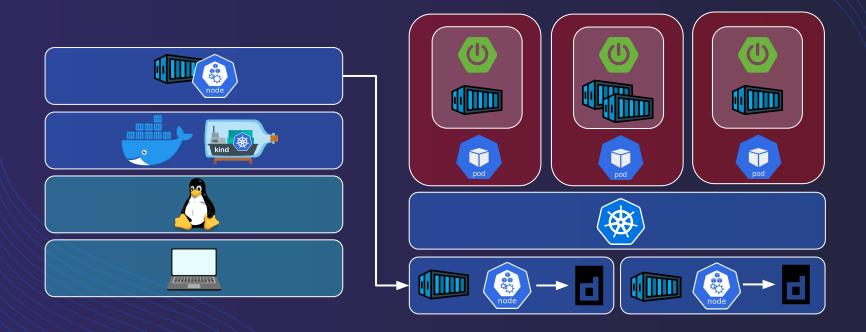

Technology overview

Antoine GITTON
Titouan MINIER MANCINI

#### Container-ception

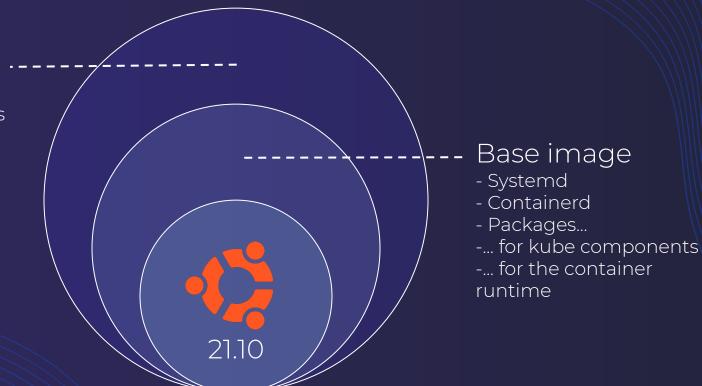

#### Containers inside containers

#### "Node" Docker image

#### Node image

- Loaded images
- Kube components
- Kubeadm

#### Internal bootstrap

#### KiND features vs Minikube

**K8S SIG** 

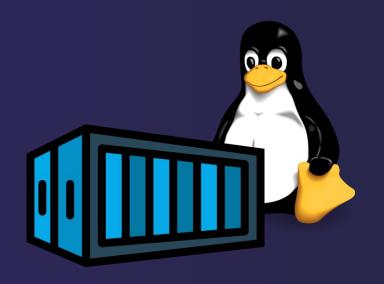

#### Configurable cluster

```
kind: Cluster
apiVersion: kind.x-k8s.io/v1alpha4
nodes:
- role: control-plane
  kubeadmConfigPatches:
    kind: InitConfiguration
    nodeRegistration:
      kubeletExtraArgs:
        node-labels: "ingress-ready=true"
  extraPortMappings:
  - containerPort: 30000
    hostPort: 7000
  - containerPort: 30001
    hostPort: 7001
```

I can do that too!

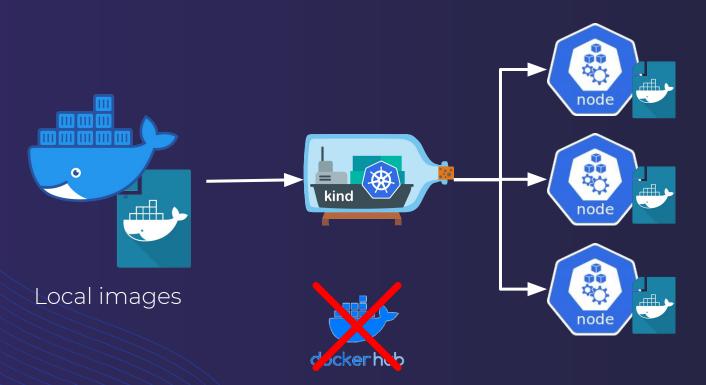

#### Linux native

I run inside a VM...

#### Image sideload

I can do that too!

#### Storage auto provisioning

#### Ingress Controller support

1 line of code, 20 seconds, deployed and ready

#### MetallB support

LoadBalancer Service on bare metal

MASTER 1

MASTER 2

#### Multi-node cluster and HA cluster

WORKER 1

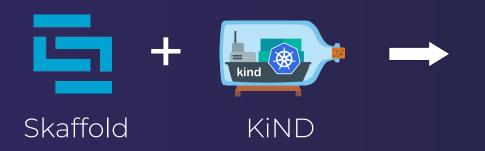

WORKER 2

WORKER 3

No way I can do that

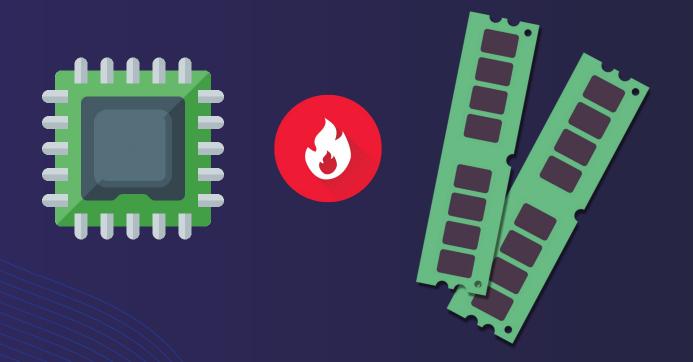

#### Storage-heavy environment

#### Yet, RAM & CPU consuming

#### Relatively slow release pace

# Demo

# Personal feedback

## Thank you

For your attention
